

North-South Sectional Perspective

# A Global Hub

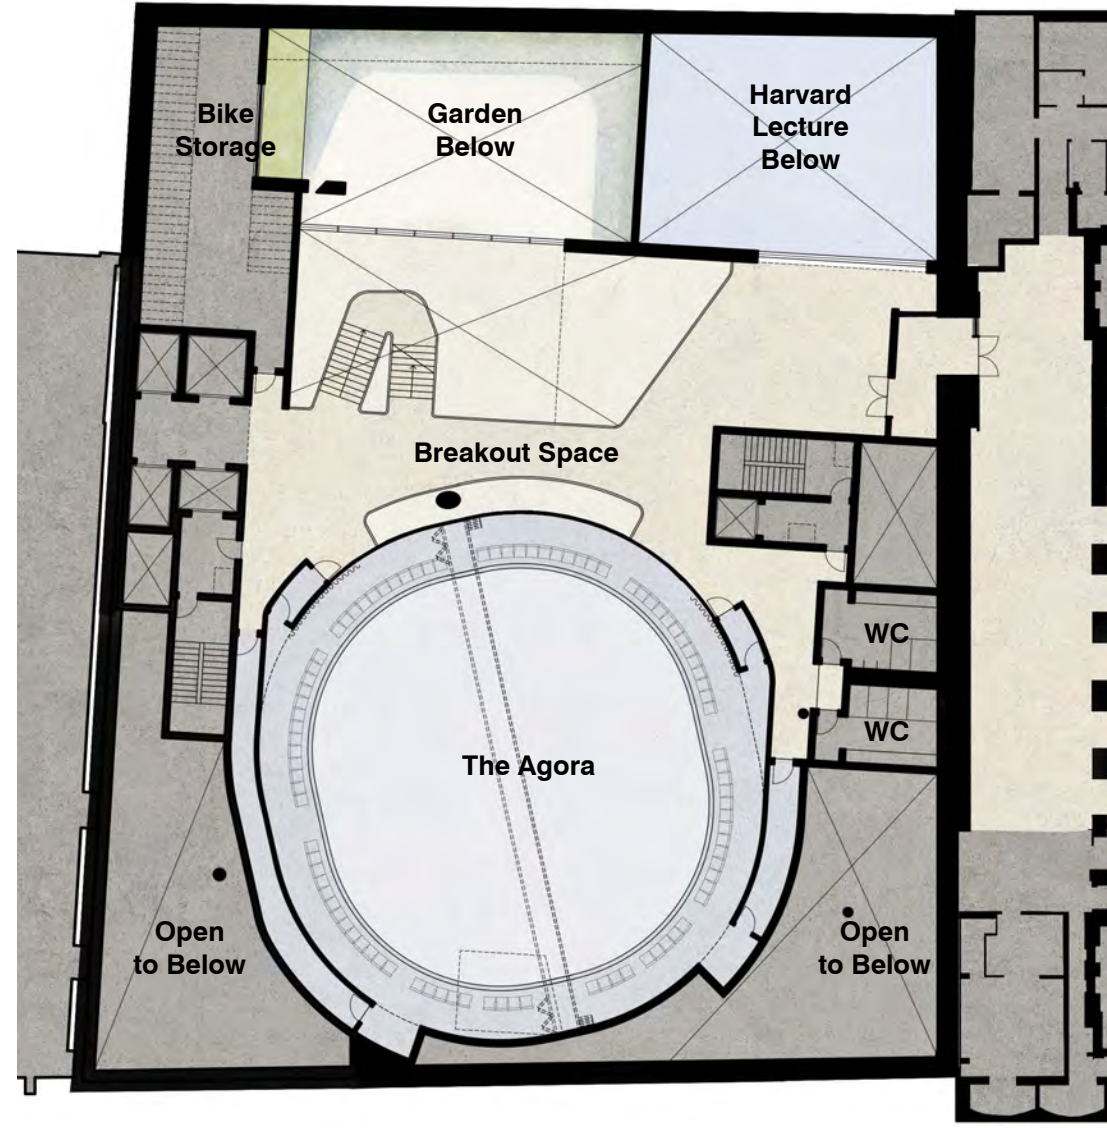

It is increasingly clear that people need to come together if we are to survive as a civilization. The mission of the Firoz Lalji Global Hub to call for debate on our greatest global challenges is noble. We attempt to address this mission in our architecture.

Our design is based on interconnection, sustainability and overlap. In other words, a weaving – independent threads that come together to make a stronger whole.

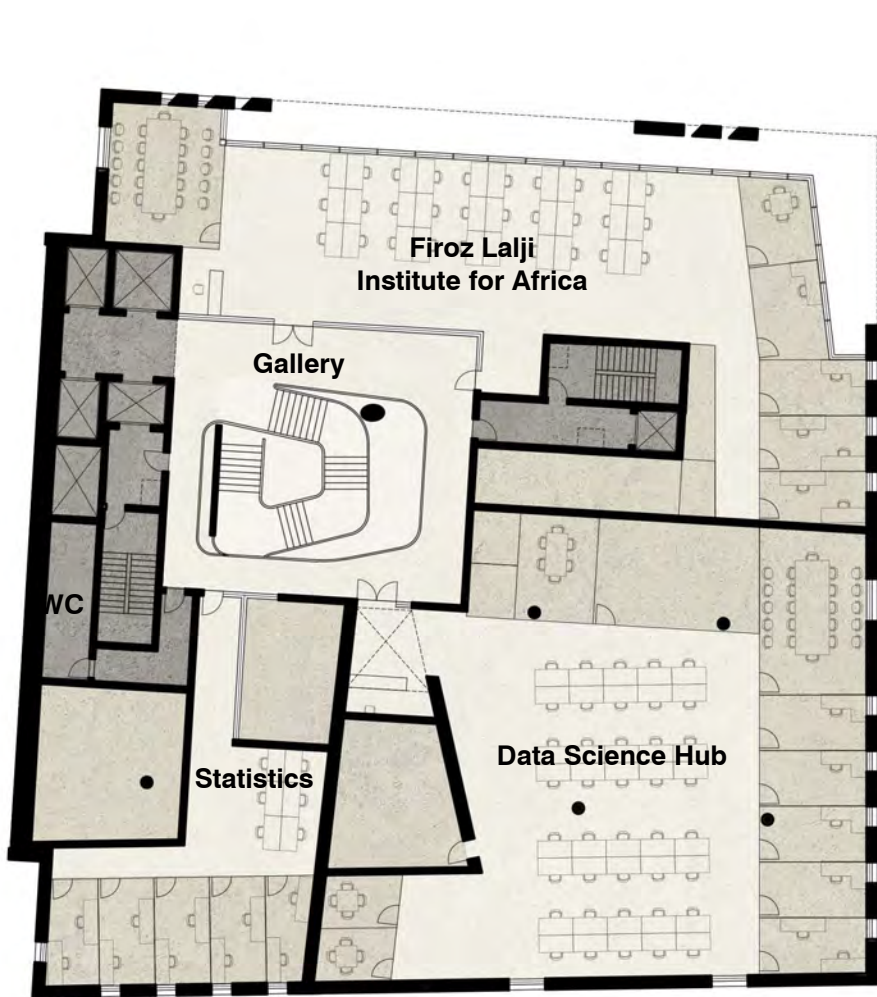

Its engineering merges the latest technologies, far reaching approaches to sustainability, inventive structural solutions and a handmade personal touch.
